

FIREREIN TPP™

THROUGH PUMP PROPORTIONER

Optimal In Wildland Firefighting Applications

FIREREIN™
PREVENT • PROTECT • EXTINGUISH

FireRein TPP™

- The FireRein TPP™ represents an affordable, yet robust, all mechanical solution to introduce Eco-Gel™ into a firefighting water stream.
- The FireRein TPP™ works by drafting Eco-Gel™ into the inlet side of a firefighting water pump. Since Eco-Gel™ contains no cross-linked particles or super-absorbent polymers, it is the only firefighting water additive that can be fed directly through a water pump.
- Users can adjust the FireRein TPP™ drafting rate, as needed and while in use, to control the thickness and viscosity of the Eco-Gel™ fire suppressant hydrogel.
